

POINT MOTOR DECODER

Connect the DCC terminal to the programming track before programming!

CV*	CV**	Values	Default	Description
513	1	1 ... 63	1	Decoder address (low address)
515	3	0 ... 255	1	Output time: Out 1 (0=permanent, 1=10ms, 2=20ms,...255=2,5s)
516	4	0 ... 255	1	Output time: Out 2 (0=permanent, 1=10ms, 2=20ms,...255=2,5s)
517	5	0 ... 255	1	Output time: Out 3 (0=permanent, 1=10ms, 2=20ms,...255=2,5s)
518	6	0 ... 255	1	Output time: Out 4 (0=permanent, 1=10ms, 2=20ms,...255=2,5s)
521	9	0 ... 7	0	Decoder address (high address)

CV* - „Lenz system“ - accessory address over 513

CV** - „Roco system“ - accessory address under 255

JUMPER:

Disconnect in case if the Slave module is connected and you want to change values in CV.

HOW TO:

Connect master to Programming track (DCC terminal), remove all Jumpers except module you want to program.

If the Jumper is disconnected, you can't modify CVs or command device!

CV 513 / CV 1	Outputs no.	CV 513 / CV 1	Outputs no.
1	1,2,3,4	33	129,130,131,132
2	5,6,7,8	34	133,134,135,136
3	9,10,11,12	35	137,138,139,140
4	13,14,15,16	36	141,142,143,144
